

POSTHOG × ABC TUTORING

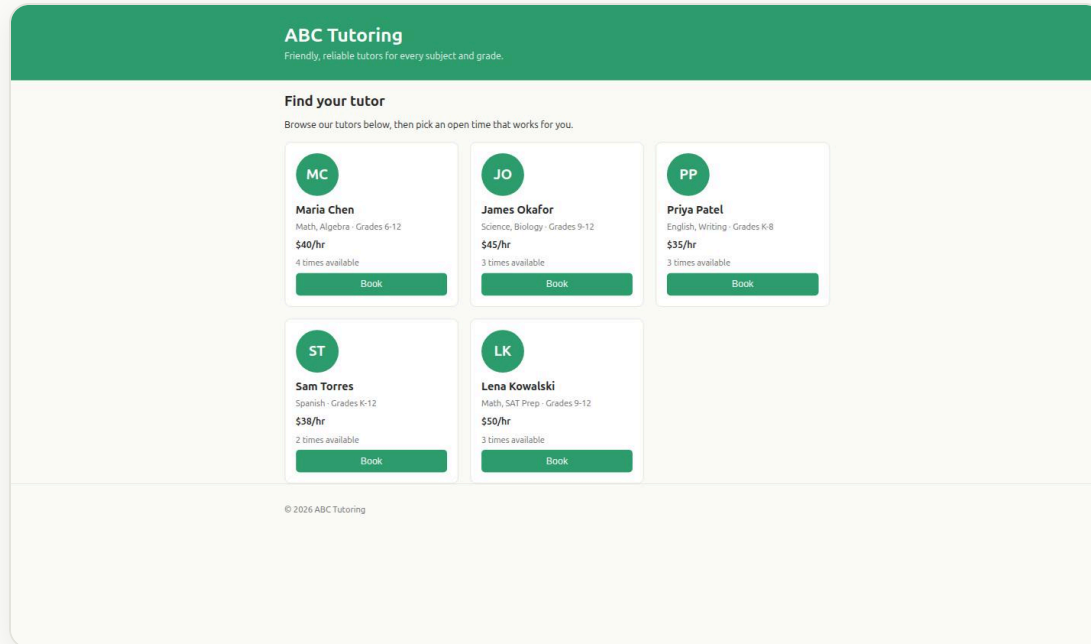

A Website for ABC Tutoring

A working prototype for browsing tutors, booking sessions, and understanding what your visitors do — built from what you told us, with analytics baked in.

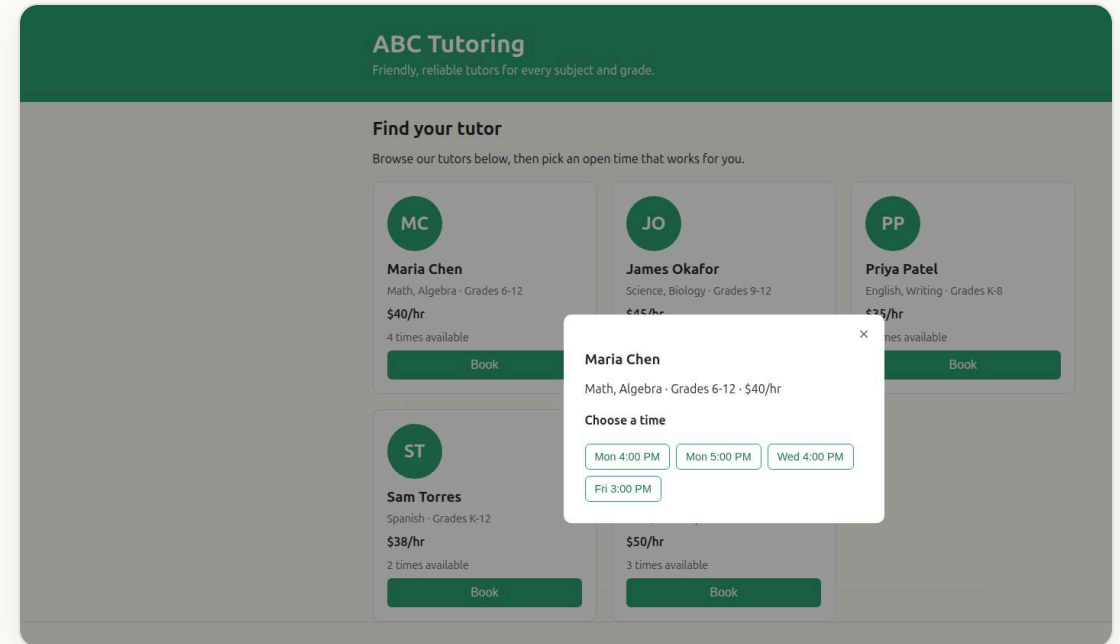

What You Told Us

- **Clean and friendly** — no dark or corporate feel, matching the warmth of your Facebook page.
- **Three key parts:** a simple home page, a tutor listings page, and a clear booking path.
- **Each tutor shows:** name, photo, subjects, grade levels, hourly rate, and open times.
- **Booking flow:** a parent picks a tutor and an open time, then submits their name, email, student's first name and grade, and subject — with a confirmation, and that time slot disappears for everyone else.
- **What matters most to you:** which tutors people look at, and whether that turns into a booking.

The Prototype: Browse & Book

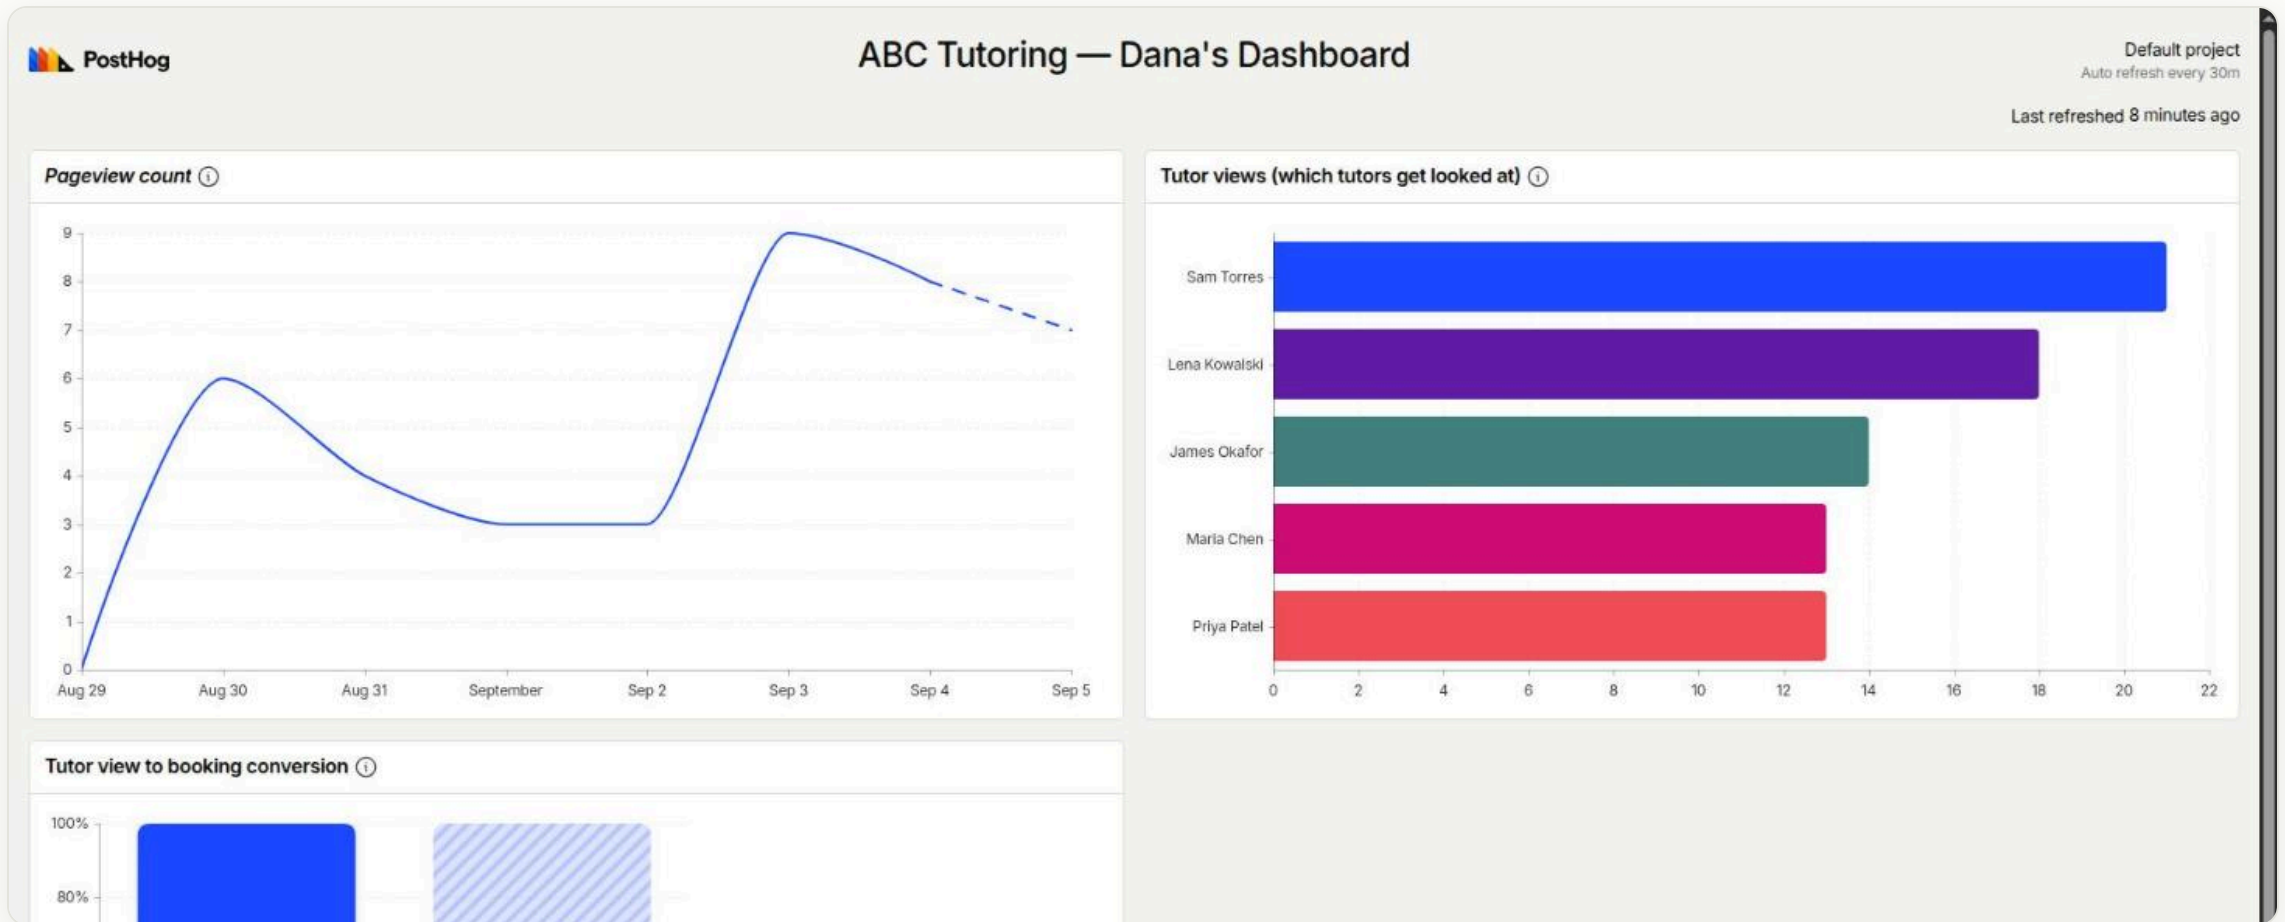

Parents browse all tutors — photo, subjects, rate, and how many times are still open.

Picking a tutor shows only their open times. Booking removes that slot instantly — no double-bookings.

Understanding Your Visitors

Live dashboard, built around the two questions you asked: which tutors get looked at, and how many of those views become bookings.

Ready for a Look

- The live site: <https://abc-tutoring-prototype.github.io/>
- The analytics dashboard: https://us.posthog.com/shared_dashboard/ZPIId7ez1tfYuE79g0dxBkjC5mdBBSA

This is a starting point — happy to adjust the look, add more tutors, or track anything else you're curious about once real visitors start using it.
